Jennifer Freeman

Assistant Vice President for Research
Development and Professor of
Toxicology, Purdue University

Dr. Jennifer L. Freeman is a Professor of Toxicology in the School of Health Sciences at Purdue University, with affiliations in Environmental and Ecological Engineering and the Department of Public Health. She also serves as Assistant Vice President for Research Development, and is a co-lead for the PFAS Strategic Research Team at ISF. Dr. Freeman is a nationally and internationally recognized leader in environmental molecular toxicology, advancing understanding of how environmental exposures influence human health across the lifespan.

Dr. Freeman's research centers on the genetic and epigenetic mechanisms of toxicity within the Developmental Origins of Health and Disease (DOHaD) framework. Her work investigates how environmental stressors—including PFAS, pesticides, metals, radiation, and emerging contaminants—impact health outcomes from early development through adulthood and across generations.
